

Want to improve your irrigation and have it water for you?

No hoses, no buttons, and now no hands!

Smart Rain is a radio-controlled system for irrigation carts in greenhouses or outdoors, powered by the PIC-300 electronics from **CONIC SYSTEM®**.

But what makes it special?

Advanced Operation:

This system operates through a wireless network that combines the power of 2.4 GHz WiFi and a 450 MHz LORA network. The result? Total connectivity and control from anywhere.

Scalability without Limits:

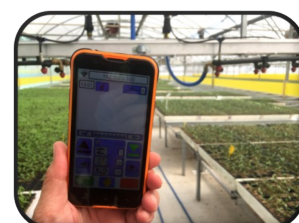

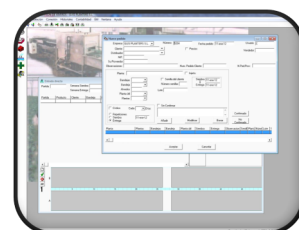

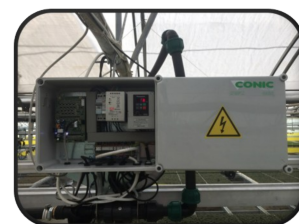

From direct control of opening and closing valves to integration into a complete irrigation programming software, this system is fully scalable to meet your needs.

Smart Remote Control:

With the remote control compatible with Android, downloadable on any mobile phone and tablet, you can program specific irrigations for different crops simply and practically.

Total Traceability:

Thanks to the software, you can keep traceability of the irrigations and fertilizers applied to each batch of plants. Never lose control of your crops!

Start saving water, time, and money with your irrigation carts!

Three ways to water, choose the one you prefer

How do you feel more comfortable?

At the forefront: Control your irrigation cart and get your feet wet watering your plants.

Listen up!: Take note of what your plants need and pass the order to the kitchen!

Command Bridge: Piloting the ship to the far reaches of space.

You decide!

Breakdown of Features: A Look at What Makes Smart Rain Special

Adapt your irrigation to your specific needs!

Android remote control, use any mobile to water

Manage up to 7 solenoid valves on your irrigation cart

16 Speeds, set it up however you want

Control 4 nutrient solutions

But that's not all! You can also add extras:

Control Reg®: Program the exact amount of water per tray

And why?

So that all your effort and work make you the best!
