

SWL Smart Washing Line Automatic Tray Washing Machine

Hygiene is one of the biggest concerns in seedling cultivation.

It is essential to ensure that the growing trays are properly cleaned to prevent the transmission of infections and pathogens.

The SWL Automatic Tray Washer is designed to remove substrate residues and elements from the previous crop, allowing the incorporation of disinfectants to sanitise the growing media.

High-Quality Materials Construction

The SWL Automatic Tray Washer is made of stainless materials such as steel and high-strength plastic polymers, ensuring great durability.

In addition, it has a plastic polymer chain for advancing the containers and quick and easy adjustments to adapt to all types of trays.

Water Recirculation System

The washing water recirculation system saves on water consumption.

The continuous filtration system ensures proper operation of the pressure unit, guaranteeing efficient and sustainable cleaning.

SWL Smart Washing Line Automatic Tray Washing Machine

Easy Access and Maintenance

The SWL Automatic Tray Washer offers easy access to all areas of the machine for cleaning and maintenance. This facilitates the operation and care of the equipment, ensuring its optimal performance over time.

Disinfection and Coating Options

There are different options to complete the washing process with disinfection, blowing and application of coating paints.

These additional options ensure complete hygiene and proper maintenance of the growing trays.

Rotary Cleaning Head

The basic element of the SWL Automatic Tray Washer is the CONIC SYSTEM rotary cleaning head, equipped with high-impact nozzles.

This component guarantees maximum cleaning of the containers, ensuring that each tray is completely free of residue and ready for its next use.

With the SWL Tray Washing Line, efficiency and hygiene in tray cleaning are within your reach.
