

SRB - Single-Rail Irrigation System

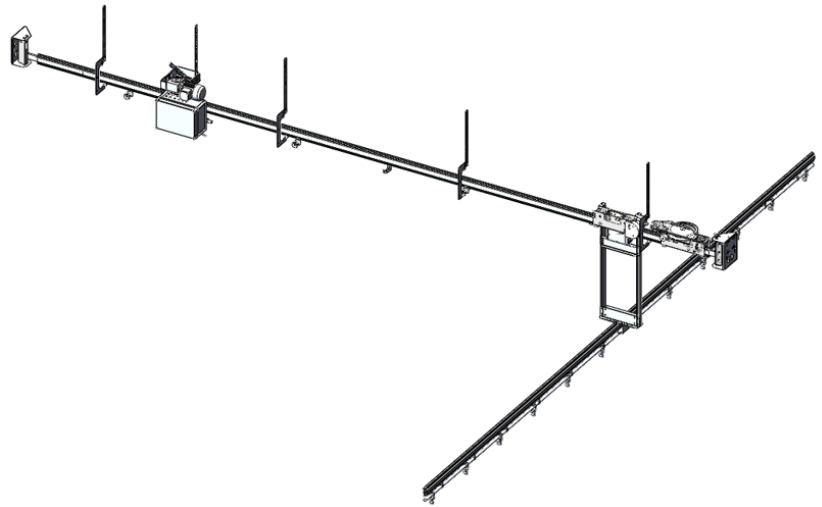

Efficiency and Optimization for Medium-Sized Greenhouses

SRB Single-Rail irrigation boom is a simple and reliable solution for medium greenhouses.

The single rail with holding hose let the booms runs up to 100 m and been 9 m wide.

The booms are configured under the Customer requirements, from a single control panel to manage the irrigation until full automatic software in the office computer.

The boom let control until 4 different nutrients formulas and select the zones where must irrigate. With this equipment you can optimize your work and save water and nutrients.

Lightweight, Effective, Reliable

The booms are made by high quality materials, too resist the indoor conditions, Aluminum, plastic polymers and galvanized steel for long life.

Control Systems

There are different control systems:

One, the easier, controls the solenoids by means magnets in the rails to delimit the irrigation zones.

The second is a Radio Frequency Control System. With this, is possible to manage the full irrigation functions from a remote control or a office computer.

The Irrigation Software lets to manage every order in the greenhouse, select the nutrients, fit the different irrigation speed, and irrigation cycles, and keep in memory every record.
