

Sowing line SSL-3030 DECOP®

High-performance sowing line with maximum precision

**Are you looking for a sowing line that
perfectly suits your needs?**

Our seed drill is fully configurable so that you can work with maximum efficiency, regardless of the type of seed or tray.

With a real working speed of up to 700 trays per hour, this machine guarantees fast and accurate sowing, both for bare seeds and pelleted seeds.

Its exclusive DECOP head ensures maximum precision in any situation, whether for small quantities or mass production, maintaining a consistent speed from start to finish.

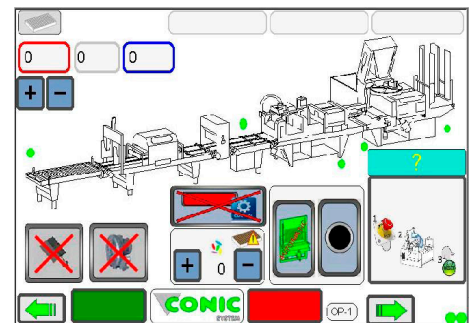

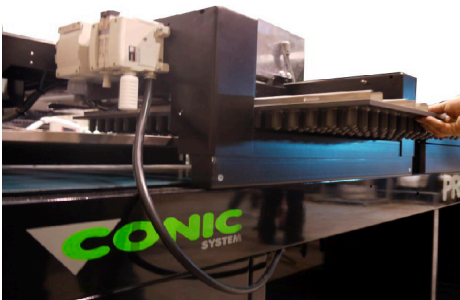

In addition, seed and tray changes are quick and easy, allowing for great flexibility without wasting time.

With this sowing line, you will achieve efficiency, precision and reliability in every work cycle.

Sowing line SSL-3030 DECOP®

High-performance sowing line with maximum precision

Ready to take your sowing to the next level?

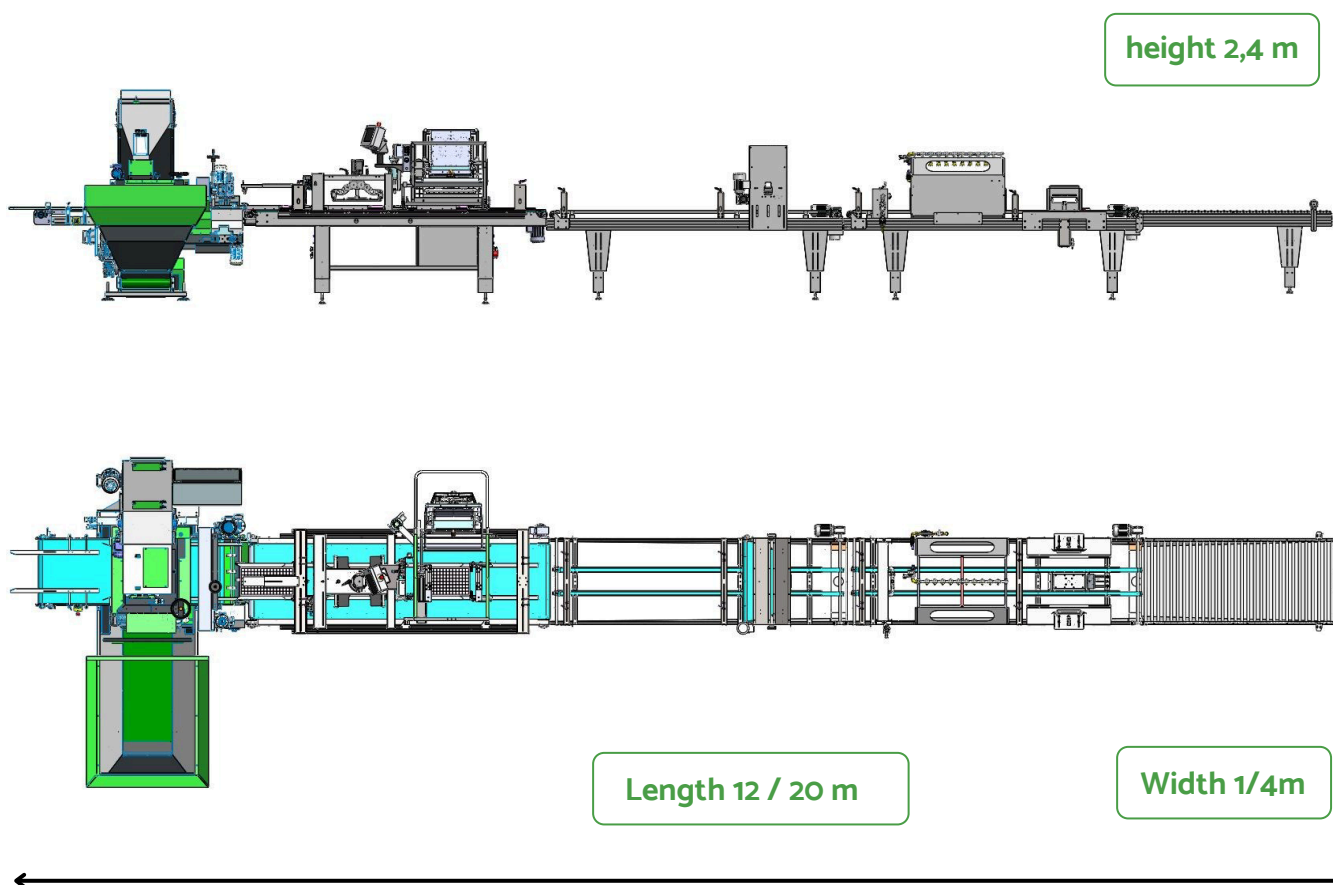

Key Features

- ✓ **Configurability:** The SSL line can be configured according to customer needs, adapting to different types of trays and specific requirements. Its modular design allows each section to be adjusted easily and intuitively.
- ✓ **Precision and Uniformity:** The filler ensures uniform and regular filling of the substrate, allowing you to choose the appropriate level of compaction for each crop. It is possible to choose between different types of fillers to meet the specific needs of each seedbed.
- ✓ **Sowing Efficiency:** The DECOP plate seeder completes the sowing of a tray in each movement. Seed and tray changes have been simplified with quick-release systems, increasing speed and user comfort.
